Rejekto

Rejekto for agencies

You manage dozens of websites and a client changes a tracker without telling you. Rejekto finds out for you.

- **Weekly scan** of every domain, desktop and mobile.
- **Comparison with the previous state:** new tracker, new cookie, score drop.
- **Tracking after rejection** for every website: one number you can explain to a client in a minute.
- **E-mail alert** when something changes. Not a dashboard nobody reads.
- **Report with your logo** that you send to the client as your own service.
- **History and PDF** for every website.

The banner went away. The tracking did not.

What your cookie banner cannot tell you

A banner collects consent. Whether the website then respects it is a different question. Rejekto does not sell banners, so it checks them independently.

- **We really click "Reject"** and reload the page. You see whether tracking stopped or only the banner disappeared.
- **Works with any banner,** your own, open source or commercial.
- **In numbers, not impressions:** how many third-party services run before a click, after consent and after rejection, and how many of them track.
- **We see what hides, too:** measurement through the website's own domain, pixels, Consent Mode pings, fonts, videos and chat.
- **Transfers outside the EU, by name.** For each provider we state its EU contracting entity, country and EU-U.S. DPF status from the official list. What we cannot source from the provider's own documents, we leave out.
- **We never score what we did not see.** If a website refuses the scanner, the scan gets no score and the report says so.
- **We know the Slovak and Czech networks, too:** Gemius, ETARGET, R2B2, CPEx, Sklik, Heureka, Glami and more.

What you will learn

- Which analytics and advertising tools run **before consent**.
- Whether the site really stops tracking **after rejection**, or just hides the banner.
- Whether the banner has a "Reject" button on the first layer and whether it is as visible as "Accept".
- Which cookies are set, how long they live and who sets them.
- Where data goes: fonts, maps, videos, chat and CDNs outside the EU.
- Whether the page treats **scrolling as consent** and what loads only when you scroll.
- Basic security headers and the redirect to HTTPS.

Prices excluding VAT

Plan S
€149
per month · up to 25 domains

Plan L
€399
per month · up to 100 domains

14 days free for 3 domains, no card required. Paid by invoice (bank transfer). Prices exclude VAT.
